An Overview On

Forcep Jaw Types

You will see that forceps in our catalogue will have either a traditional serrated jaw or a different design which is known as atraumatic (or non-traumatic).

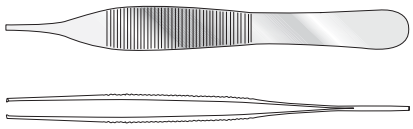

Traditional Serrated Jaw

The traditional serrated jaw is generally more robust and used on forceps where the areas are not as delicate.

Choosing the most suitable needle size

Our tungsten carbide inserts are available in a variety of styles. Choosing the most suitable needle size for each procedure helps give the surgeon maximum grip and control.

Coarse 0.65mm
For powerful needle holder patterns and wire twisters. Maximum holding capabilities for heavy needles or wire.

Standard 0.5mm
Used, for example, in Mayo-Hegar, Mathieu Needle Holders. For needles 3-0 and larger.

Fine 0.4mm
For delicate needle holders such as Crile-Wood and DeBakey. For needles and sutures between 4-0 and 6-0.

Micro 0.2-0.3mm
For micro needle holders such as Castroviejo, Microvascular and Mini-Ryder. For delicate needles and sutures between 7-0 and 10-0.

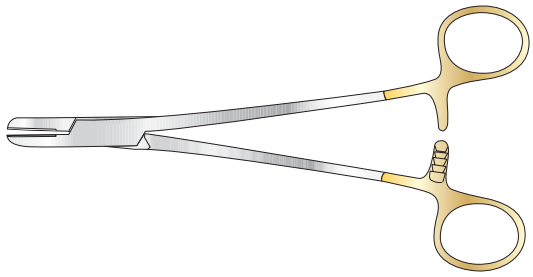

Smooth
Smooth tungsten carbide surface reduces damage to delicate needles and suture of 6-0 and finer.
